

Snehil's Portfolio

A clean, elegant, and responsive personal portfolio webpage built with pure **HTML** and **CSS** — no frameworks, no JavaScript, just beautiful web fundamentals.

Preview

The portfolio features a warm dark-brown aesthetic with three typographic layers — serif, sans-serif, and script — creating a poster-like, editorial feel.

Project Structure

```
portfolio/  
  portfolio.html    # Main HTML file — structure and content  
  portfolio.css     # Stylesheet — layout, typography, colors
```

What It Does

This is a **personal portfolio page** for Snehil, a web development and UI design student at ITM Skills University. The page includes:

Section	Description
Hero	Large typographic title with name, institution label
About Me	Short personal bio and interests overview
Interests	Styled list cards (Web Dev, UI Design, Basketball, Trekking)
Contact	Email, LinkedIn, and GitHub links with hover effects

Technologies Used

Technology	Purpose
HTML5	Semantic structure and content
CSS3	Styling, layout, animations, responsiveness
Google Fonts	Playfair Display , Poppins , Great Vibes
CSS Transitions	Hover animations on list cards
Media Queries	Mobile-responsive layout at 768px breakpoint

No JavaScript. No frameworks. No build tools.

How to Run Locally

Running this project is as simple as it gets — no installations, no terminal commands needed.

Option 1 — Direct Open (Easiest)

1. **Download** or clone the project files:

```
git clone https://github.com/snehill/portfolio.git
cd portfolio
```

2. **Open** `portfolio.html` directly in your browser:

- On **Windows**: Double-click `portfolio.html` , or right-click *Open with* your browser
- On **macOS**: Double-click `portfolio.html` , or run:

```
open portfolio.html
```

- On **Linux**: Run:

```
xdg-open portfolio.html
```

Important: Both `portfolio.html` and `portfolio.css` must be in the **same folder** for styles to load correctly.

Option 2 — Local Dev Server (Recommended for Development)

For a better development experience with auto-refresh, use VS Code's **Live Server** extension:

1. Install [Visual Studio Code](#)
 2. Install the **Live Server** extension (by Ritwick Dey)
 3. Open the project folder in VS Code
 4. Right-click `portfolio.html` **"Open with Live Server"**
 5. The site will open at `http://127.0.0.1:5500/portfolio.html`
-

Option 3 — Python Simple Server

If you have Python installed:

```
# Python 3
python -m http.server 8000

# Then open: http://localhost:8000/portfolio.html
```

Design Highlights

Color Palette

Role	Color	Hex
------	-------	-----

Background	Dark Brown	#4b2e1e
Text / Foreground	Warm Cream	#f6f1e8
Card Hover	White (18% opacity)	rgba(255,255,255,0.18)

Typography System

"My"	Playfair Display (serif)	— 100px
"Portfolio"	Poppins (sans-serif)	— 85px, bold
"Snehil"	Great Vibes (script)	— 80px

This three-layer type stack gives the hero section a modern editorial / poster look.

Hover Interactions

List cards slide **10px to the right** and brighten on hover — creating a tactile, interactive feel without any JavaScript.

```
.block li:hover {
  transform: translateX(10px);
  background: rgba(255, 255, 255, 0.18);
}
```

Responsive Design

The layout adapts for mobile screens (≤ 768px):

Element	Desktop Mobile	
My (serif)	100px	65px
Portfolio (sans)	85px	55px
Snehil (script)	80px	50px
.poster width	85%	95%

Future Improvements

Here are features and enhancements that could take this portfolio to the next level:

Content & Sections

- ☐ **Projects Section** — Showcase real projects with thumbnails, tech stack tags, and live/GitHub links
- ☐ **Skills Section** — Visual skill bars or badge-style tags (HTML, CSS, JS, etc.)
- ☐ **Education Timeline** — Chronological display of academic milestones
- ☐ **Testimonials / Recommendations** — Add quotes from mentors or colleagues

Design & UX

- ☐ **Dark/Light Mode Toggle** — Let users switch themes with a CSS variable-powered toggle
- ☐ **Smooth Scroll Navigation** — Fixed nav bar linking to each section
- ☐ **Entrance Animations** — Use `@keyframes` or the Intersection Observer API to fade sections in as you scroll
- ☐ **Custom Cursor** — A branded cursor for a unique feel
- ☐ **Profile Photo** — Add a circular avatar near the hero section

Technical

- ☐ **JavaScript Enhancements** — Contact form with validation, typing animation for the hero title
- ☐ **SEO Optimization** — Add `<meta>` description, Open Graph tags for social previews
- ☐ **Favicon** — Add a custom browser tab icon
- ☐ **CSS Custom Properties** — Refactor colors and font sizes into `:root` variables for easier theming
- ☐ **Accessibility (a11y)** — Improve ARIA labels, keyboard navigation, and color contrast ratios
- ☐ **Performance** — Self-host Google Fonts to avoid external dependency and improve load speed

Deployment

- ☐ **GitHub Pages** — Host for free at `snehilll.github.io`

- ☐ **Custom Domain** — Connect a personal domain (e.g., `snehil.dev`)
 - ☐ **Analytics** — Integrate privacy-friendly analytics (e.g., Plausible or Umami)
-

Live Demo

Once deployed, link will be added here.
